Presentation

SETRAS Special Transportation Services With its fleet of **180 trailers**, **150 tank containers** and **200 bulk containers**, Setras has captured the market regarding both road and **intermodal transport**. Setras was created for transporting liquids in tanks, but over the years it has equipped itself with tipping, tilting, hook lift and remountable vehicles, to guarantee the transportation of all types of goods. The company Setras has **three different logistical sites** throughout the country, the registered office is at Narni (TR) and its two operating subsidiaries are located in Trecate (NO) and in Priolo Gargallo (SR), where there is based all vehicles and specialized staff. At the headquarters in Narni we are equipped with a workshop garage for internal vehicle maintenance and an industrial washing system for cleaning the tanks. Quality on the road, customer focus, work place **safety and respect for the environment** is the motto that has always distinguished the company Setras.

Setras[®]

Story

Three generations have gone into making Setras a leading company in Special transportation. The company Setras was founded in 1980 as a line of business for GETI SpA by Alberto Giovannini, part of the second family generation, it was founded for the road transport of high temperature chemical products. In the **early 90's the company** invested in intermodal transport and began a journey that proved successful then and also for the future. From the year 2000, Amedeo Giovannini, part of the third family generation and Company Commercial Director, understood the importance of industrial waste transport and acquired all transport authorizations, both national and international, and defined the way that sent Setras towards its current Core Business. Today we are proud of having important customers both in the Chemical sector and also in the **Industrial Waste sector**.

GETI SpA..***

Transportation

Setras carries out the transport of chemical products using road and intermodal transport.

We are specialists in **ADR transport** (road), RID (Railway) and **RINA (Sea)** and our equipment/vehicles are inspected for all forms of risk. With its logistics bases located in northern Italy, central Italy and in Sicily, Setras ensures widespread coverage in all areas, national and international, for short and **long-distance transport**. Abroad in major European cities, Setras uses primary transporters that carry out on its behalf the terminal service (loading and unloading of containers).

For over 40 years Setras has specialized in high temperature transport, up to and over 300°.

It has insulated tankers with **jacketed valves and steam heating coils**. The transport service, both by road and intermodal, is carried out across the whole of Europe.

Over the years Setras has organized itself, with its many road and **intermodal transport vehicles**, to carry out the clearance of industrial sites, clearance of tanks and of landfills. With its fleet of vehicles it has guaranteed **national and international transport** for over 30 journeys per day. Setras staff expertise and their capabilities in the railway sector can also guarantee the customer any formations of complete trains or full daily deliveries of either tank containers or open Top tipper containers.

Quality on the road and Customer focus

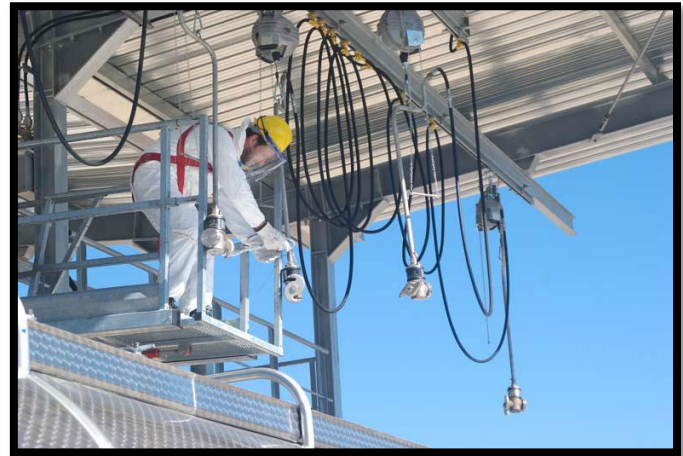

Quality on the road, **customer focus**, work place safety and respect for the environment is the motto that has always distinguished the company Setras. Since 1994 SETRAS is certified according to standards UNI EN 29002, subsequently modified to VISION 9001/2008 No.146/3 of **CertiQuality**. Since 1998 SETRAS also holds the certification SQAS (**SAFETY AND QUALITY ASSESSMENT SYSTEM**) n. 84662 Certiquality. Since February 2005 SETRAS has integrated its quality management system in line with the Environmental Certification and the Certification for Safety in order to comply with the requested requirements of the standard UNI EN ISO 14001: 2004 and OHSAS 18001: 2007.

Industrial cleaning

SETRAS industrial cleaning sector performs the work concerning the **cleaning of tanks**, container tanks and silos.

Using the experience gained in 60 years of working with chemical transportation, today the company uses a brand new plant equipped with tracks for the cleansing of **chemical and food** products.

Environmental Care

'Life Cycle Thinking' is our approach to work in order to reduce the environmental impact of all our activities. For this reason we control and improve, in terms of environmental quality, the sequence of maintenance, cleaning and the use of our equipment. Our company and our industrial processes are subjected to an environmental management system certified to ISO 14001 standards. To minimize the environmental impact of industrial processes means to:

- Reduce the consumption of energy and natural resources;
- Contain the emission of pollutants and noise pollution;
- Improve work place environments;
- Eliminate conditions for any potential environmental accident.

In our company **every single industrial process is carried out using innovative procedures** together with methods which are in continuous improvement, in respect of the environment. A specific and significant example of this is the introduction of our internal industrial cleaning system. This **process is a technical starting point** for further improvements in the sector concerning the waste disposal from cleaning. All our industrial processes are certified according to standard ISO 14001. This is a voluntary certification that guarantees the control and **continuous improvement of any environmental impact** from production processes, starting from the actual use of energies until waste management.
